# CS 111: Review Quiz: Due by 5:00pm Friday, January 11 <br> Your Name 

January 9, 2019

1. Answer to question 1 :

Use inline equations for simple math $1+1=2$, and centered equations for more involved or important equations

$$
\begin{equation*}
a^{2}+b^{2}=c^{2} \text {. } \tag{1}
\end{equation*}
$$

Some people like to write scalars without boldface $x+y=1$ and vectors or matrices in boldface

$$
\begin{equation*}
\mathbf{A x}=\mathbf{b} . \tag{2}
\end{equation*}
$$

An example of a matrix $\mathrm{EAT}_{\mathrm{E}} \mathrm{X}$ :

$$
\mathbf{A}=\left(\begin{array}{ccc}
3 & -1 & 2  \tag{3}\\
0 & 1 & 2 \\
1 & 0 & -1
\end{array}\right)
$$

With a labeled equation such as the following:

$$
\begin{equation*}
\frac{d^{2} x}{d t^{2}}=a \tag{4}
\end{equation*}
$$

you can referrer to the equation later. In equation 4 we defined acceleration.
2. Answer to question 2
